Mercer's theorem

Eigendecomposition of a kernel

A continuous function $K : ([0, 1] \times [0, 1]) \rightarrow \mathbb{R}$ is a *kernel* if it is:

- ▶ Symmetric: $K(a, b) = K(b, a)$
- ▶ Positive semi-definite:

$$\sum_{i=1}^n \sum_{j=1}^n K(x_i, x_j) c_i c_j \geq 0$$

for all $x_1, \dots, x_n \in [0, 1]$ and $c_1, \dots, c_n \in \mathbb{R}$

Now define an integral operator on $\mathcal{L}^2[0, 1]$ using K :

$$(T_K f)(x) = \int_0^1 K(x, s) f(s) ds$$
