Mercer's theorem
Eigendecomposition of a kernel

A continuous function $K : ([0,1] \times [0,1]) \to \mathbb{R}$ is a *kernel* if it is:
- Symmetric: $K(a,b) = K(b,a)$
- Positive semi-definite:

$$\sum_{i=1}^{n} \sum_{j=1}^{n} K(x_i, x_j) c_i c_j \geq 0$$

  for all $x_1, ..., x_n \in [0,1]$ and $c_1, ..., c_n \in \mathbb{R}$

Now define an integral operator on $\mathcal{L}^2[0,1]$ using K:

$$(T_K f)(x) = \int_0^1 K(x,s) f(s) \, \mathrm{d}s$$
